Reference is made to the following documents:

D1 : US 6118852 A D2 : KP 10-2001-0008566 A

The invention as defined in claims 1-11 is an electrostatic charge remover using soft x-ray, which is characterized by a W thin film layer over the Be window in the ion generating tube.

D1 discloses an x-ray transmissive window assembly, which includes an AI or an AI alloy. D2 shows an electrostatic charge remover using soft x-ray, which is characterized by a Ti thin film layer over the Be window in the ion generating tube.

D2 is the closest document. The difference between the claimed invention and D2 is the thin film material which covers the Be window. Any documents do not show the W thin film on the Be window in the present

Accordingly, the subject matter of claims 1-11 is new and considered to involve an inventive step.

Claims 1-11 are industrially applicable.
